

Part II: Python

Growth of major programming languages

Based on Stack Overflow question views in World Bank high-income countries

Year over year growth in traffic to programming languages/platforms

Comparing question views in January-August of 2016 and 2017, in World Bank high-income countries. TypeScript had a growth rate of 142% and an average size of .36%; and was omitted.

Python has many applications

- Web development
- Application development
- Computer graphics
- Scientific computing
 - Bioinformatics
 - Machine learning
 - Simulations

<https://www.python.org/about/quotes/>

Three alternatives to get Python

- Jupyterhub on educcomp (in browser)
- Google Colaboratory (in browser)
<https://colab.research.google.com/>
- Anaconda (local install, ~1.5GB of space required)

Jupyterhub

Please choose one of the following applications:

- [RStudio](#)
- [Jupyterhub](#) ←

Jupyterhub

Python 3 

Code

```
In [1]: print("Hello World!")
```

```
Hello World!
```

```
In [ ]:
```

Counting like a computer scientist

0, 1, 2, 3, 4, 5, 6, 7, 8, 9, ...

Indexing in Python

| | | | | | |
|---|---|---|---|---|---|
| P | y | t | h | o | n |
| 0 | 1 | 2 | 3 | 4 | 5 |

Indexing in Python

| | | | | | |
|---|---|---|---|---|---|
| P | y | t | h | o | n |
| 0 | 1 | 2 | 3 | 4 | 5 |

```
In [1]: x="Python"
```

```
In [2]: x[0]
```

```
Out[2]: 'P'
```

Indexing in Python

```
In [1]: x="Python"
```

```
In [2]: x[1:4] ← We index from the first element to
```

```
Out[2]: 'yth'           one past the last element
```

Indexing in Python

| | | | | | |
|---|---|---|---|---|---|
| P | y | t | h | o | n |
| 0 | 1 | 2 | 3 | 4 | 5 |

```
In [1]: x="Python"
```

```
In [2]: x[3:] ← Missing number means "to the end"
```

```
Out[2]: 'hon'
```

We can also index in reverse

| | | | | | |
|----|----|----|----|----|----|
| P | y | t | h | o | n |
| -6 | -5 | -4 | -3 | -2 | -1 |

We can also index in reverse

| | | | | | |
|----|----|----|----|----|----|
| P | y | t | h | o | n |
| -6 | -5 | -4 | -3 | -2 | -1 |

```
In [1]: x="Python"
```

```
In [2]: x[-6]
```

```
Out[2]: 'P'
```

We can also index in reverse

```
In [1]: x="Python"
```

```
In [2]: x[-5:-2] ← Again, we index one
```

```
Out[2]: 'yth'           past the last element
```

We can also index in reverse

```
In [1]: x="Python"
```

```
In [2]: x[-3:] ← This captures the last 3 characters
```

```
Out[2]: 'hon'
```
